Professional Summary

Software engineer and technical lead with 10+ years of experience building and scaling digital products across global markets. Specialized in modern web architectures (React, NodeJS, Python, Next.js), cloud services (AWS, GCP), and mobile development (React Native). Proven track record of leading distributed teams, improving system performance, and driving product-focused engineering decisions.

Key Skills

- ReactJS, VueJS, Redux, TypeScript, Next.js, Svelte
- NodeJS, Express, Python (FastAPI)
- GraphQL, REST, Prisma, Postgres, MongoDB
- AWS (Lambda, S3, CloudFront, RDS, Dynamo), GCP (GKE, Functions, Firebase, Cloudfront, EC2)
- Event-Driven Architecture (Kafka), Micro frontends
- CI/CD (GitHub Actions, Sentry, SonarCloud, PagerDuty)
- Mobile development (React Native / Expo)
- Docker, Unity

Professional Experience

Remedy Product Studio — Technical Lead

Jun 2023 – Present

- Leading a distributed team across Europe, US, and Latin America in a VueJS/Python (FastAPI) project.
- Monitoring the application's health using tools like Sentry, Pager Duty, and GCP
- Acting as hands-on developer and mentor, driving best practices in clean architecture and code quality.

Still Life Inc. — Lead Frontend Engineer

Oct 2022 – Jun 2023

- Led frontend architecture for a wellness app that helps users stay focused and relaxed.
- Implemented architectural improvements that reduced load time and improved user retention.

Pipefy — Principal Software Engineer

Oct 2021 – Oct 2022

- Acted as principal engineer, guiding feature teams to deliver new functionalities aligned with business goals.
- Collaborated with Frontend Platform Team to create internal tools that improved developer productivity.
- Proposed and implemented an internal RFC system to create standards and reduce duplicated code.
- Proposed and implemented an internal mentoring program in the engineering.

X-Team — Software Engineer

Dec 2020 – Oct 2021

- Contributed to large-scale SaaS applications using React, NodeJS, Next.js, and microservices architecture.
- Focused on performance optimization and test automation.

RD Station — Senior Software Engineer

Jun 2017 – Dec 2020

- Built drag-and-drop editor for landing pages, emails, and Popups from scratch, increasing customer engagement and feature adoption.
- Built a micro-frontend orchestrator from scratch (front-hub) and decreased the time new frontend projects needs to be deployed.
- Acted as lead engineering making important architecture decisions.
- Applied clean architecture and SOLID principles, improving code maintainability and reducing bugs.

Daitan Group — Front-end Specialist

May 2016 – Jul 2017

- Led frontend development for projects in partnership with a Palo Alto-based company.
- Worked on micro frontends and CI/CD pipelines.

Education

Bachelor's Degree in Software Engineering, Unicesumar University, 2021

Bachelor's in Physics (incomplete), Federal University of Rio Grande do Sul

information systems technician, Federal University of Rio Grande do Sul
